

BadgeWorks - ID Card System

DataWorks Plus' BadgeWorks ID Card System gives your agency the ability to create and print custom ID cards and badges. We can interface BadgeWorks with Digital PhotoManager, existing access control systems, court attendance systems, evidence tracking, as well as human resource and employee databases to eliminate the need for duplicate data entry. BadgeWorks can create custom ID cards for uses such as employee ID, inmate worker ID, pistol permits, and visitor ID.

BadgeWorks can print virtually any custom format on smart cards, proximity cards, magnetic stripe cards, and plain PVC cards. Cards can be printed dual sided, edge to edge, and in landscape or portrait formats. Options such as barcodes and laminates can also be added to the ID cards if desired. The laminates can be clear or include a generic or custom holographic for added durability and security. BadgeWorks can also be offered with integrated signature capture. This option includes a signature capture pad which will capture the signature to be placed on the ID card or badge.

DataWorks Plus can offer the BadgeWorks ID Card System with Fargo, Zebra (formerly Eltron), and DataCard printers. All series and features of these printers are supported and will produce high quality, durable ID cards and badges.

A few of the options available are:

- **Clear, protective card overlay** - The printer will automatically apply a clear, protective overlay to one or both sides of the card.
- **Dual-sided printing** - A printer that provides a built-in card flipping mechanism can be used to automatically flip a card and print on the reverse side.
- **Advanced card cleaning** - A printer can be provided that will clean both sides of the blank cards to assure more consistent, high-quality prints on the cards.
- **Magnetic stripe encoding** - Cards can be encoded to provide additional functionality.
- **Full-color** - Cards can be printed in full color and customized as needed for your agency.
