

# Digital CrimeScene

## Secure Immediate Digital Photography

Now you can always say "yes" to the courtroom question,  
"Is this a true and accurate representation?"

Digital CrimeScene is developed to account for any type of crime scene your agency may encounter. Whether your crime scene has 12 images or thousands of images Digital CrimeScene is the solution you need.

The automated workflow manager allows cases or specific data to be routed to and reviewed by supervisors and other selected individuals.

Digital CrimeScene runs on a stand-alone Enterprise System to securely store your forensic photos. The system keeps all of your photos secure by never allowing the original photo to be altered or deleted. However, export features allow you to easily edit or enhance copies of the photos.

Always be prepared for court with proven image security, electronic courtroom presentations, printed photo journals of cases, and chain of custody reports.

- **Secure Evidence:**  
All photos are written to CD-ROM and SQL database. These "Digital Negatives" will never allow the original to be altered.
- **Image Enhancement:**  
Copy photos to a photo-editing package for enhancement. The original image is never altered.
- **Customizable:**  
Data fields can be customized to meet your agency's specific needs.
- **Backward Compatibility:**  
35MM film can be scanned and processed alongside digital photos.
- **Integration:**  
Can be set-up to work with your existing equipment and software.
