

SAF-ID TXMID

Texas Mobile Identification

DataWorks Plus provides mobile hardware & software to capture and submit fingerprints to the Texas Department of Public Safety for biometric identification of a suspect. The SAF-ID TXMID (Texas Mobile Identification) software supports retrieval of the suspect's criminal history information, outstanding wants and warrants, and also searches the FBI's RISC Database (Repository of Individuals of Special Concern).

DataWorks Plus has taken a different approach from other mobile identification vendors. Our TXMID software was designed to support fingerprint scanner hardware from various hardware manufacturers. This allows DataWorks Plus to take an independent, open, and objective approach when recommending the fingerprint scanners to meet the specific needs of each customer.

Prices start at less than \$1,700!

Finding a solution to meet your agency's needs is only a click away:

This approach provides your agency with total flexibility to select the best fingerprint scanner for a wide variety of applications. With mobile identification, one size does not fit all. TXMID systems often require different fingerprint scanners for different applications. Our multi-vendor approach provides your agency with the opportunity to select the best hardware that is available today and in the future without being tied to a specific

Texas Mobile Identification (TXMID) Positive Identification Applications

- ◆ Roadside stops
- ◆ Prior to serving a warrant
- ◆ Medical Examiner's Office
- ◆ Crime scene investigation victim identification

SAF-ID TXMID

Texas Mobile Identification

DataWorks Plus has created a secure mobile service that meets or exceeds the CJIS Security Policy including FIPS 140-2. Agency directors have immediate access to system statistics and reports to see the success of the TXMID system.

TXMID Device Manager Server Application Benefits

Manage thousands of Mobile Devices with single point connection to the Texas DPS System

Transaction Manager – Track the status of each fingerprint search transaction

Activity Tracking/Monitoring – Use a Web Browser application to see the results of each fingerprint transaction

Guaranteed delivery of each fingerprint search transaction (even if network is temporarily unavailable)

Reporting and Statistics – Use a Web Browser application to track the success of your local and state searches

Message Queue - Send messages from server to each edge device

Point and Click Software Installation

Automated Software Updates

Automated Weekly Status Reports

Fingerprint Device Independent – Implement fingerprint readers using multiple vendors' fingerprint scanners

Resolves Network Connectivity Issues

SAF-ID TXMID is MDT Compatible
